1. more details / specification on 16" pot non-woven material

- A. Large planting bag made from non-woven fabric materials, not the standard plastic/rubber planting bags. Alternatively, high-density polyethylene (HDPE) grow bags are fine too. Purpose of these bags is to house larger plants with strong root systems (eg. breadfruit, jackfruit, common coastal plants etc), hence the material used must be durable and long lasting. Please find an additional reference image below.

2. pot rack - does it have to be Stainless steel or can it be iron pipe with double paint coat?
A. Key requirements of the rack must be rust and corrosion resistant and heavy duty/durable; capable of holding the indicated weight. Materials that fit this criteria is fine.
3. cocopeat - can it be compressed blocks equivalent to the weight when loosen?
A. Yes
4. veli fureyni - what does ss 304 grade material mean?
A. Stainless steel grade 304. It must be rust and corrosion resistant.
5. planting bags - Assuming given measurement is the diameter, do they have a preferred height?
A. Diameter is the key specification, standard market heights for the given diameter is fine.
6. leaf blower - should the blower has sucking function with a bag or is it just a leaf blower?
A. Just a leaf blower, no suction function
